

Computer Security

Datum's Computer Security line of products help prevent the theft of your computer as well as your irreplaceable data.

The ever expanding line of computer security products provided by Datum are the top of the line in innovative security measures. With their heavy duty steel construction and locking doors to the state of the art dividers, ventilation system, and electrical capabilities, Computer Security by Datum will leave you with peace of mind about your stored assets.

LapTop Cart™

The LapTop Cart™ provides a safe and easy way to transport numerous laptops in a school, government, training, or corporate environment. The LapTop Cart™ provides storage and charges up to 20, 26, or 32 laptops, tablet PCs, ultra mobile PCs, and other similar devices.

Patent Pending.

Timer

Every cart is equipped with a timer feature, allowing you to effortlessly alternate charging two different banks of laptops, eliminating the possibility of overloading a circuit. The timer also provides four extra constant power receptacles for use with other devices or in conjunction with the Pop Up Power Center.

Rear Panel Access

Electrical components and timer can be accessed through the three point locking rear door panel by IT staff. The door is designed to ensure that IT configurations of the timer and electrical cords remain secure. The back of the cart is free from any obstructions that would hinder doorway clearance.

Pop Up Power Center

Optional Pop Up Power Center provides power and cable access to the top of the cart, allowing users to power equipment being used on top, such as projectors.

Laminate Top

Durable laminate top provides a hard, smooth working and writing surface unobstructed by handles or metal lip.

LTC-PC26

Power Management Divider

Power Management Dividers are designed for cord management of power bricks and are removable to facilitate the storage of other equipment. The unique ventilation pattern on the dividers ensures proper cooling and airflow to prevent overheating.

Tambour Doors

Retractable tambour doors require smaller footprint to open and close. They are translucent, so visual inventory and charging status may be checked while still keeping the cart secure. Reinforced lock hasp with sliding guard prevent doors from being pried open and will accommodate a pad or combination lock.

Ventilation

The unique ventilation pattern on the sides of the cart produce convective airflow when the doors are closed and lateral airflow when the doors are open for maximum cooling.

For more information on the LapTop Cart™, visit

Cable Management

Manage and organize your LapTop Cart™ power supply cords with the grommet hole and cord winder, mounted on the end of the LapTop Cart™ below the handle. The handle may also be used as a second cord wrap. The cart is equipped with an on/off switch for safe connection and disconnection from wall receptacles.

CPU-2M

CPU Locker™

Most CPU security systems secure the CPU, but not the data stored in it. The CPU Locker™ not only secures the CPU, but it helps deter and prevent any type of unwanted access to the computer and your valuable information stored on it. A slide out tray and cable grommets make for easy maintenance access.

CPU1

LapTop Tower™

The LapTop Tower™ is great for training rooms or any other place large quantities of laptops are stored. Holds up to 35 laptops, with removable dividers for storage of other equipment and peripherals. Storing and securing is done quickly and easily with the 3 point locking door.
